Phase 1 — Idea Generation & Prioritization

Source-grounded standalone document

Idea Generation & Prioritization

The documented system is a secure REST API platform for FAQ creation, authentication, AI-powered content management, semantic search, and category organization.

Priority	Epic / Module	Core Scope	Dependency
1	Project Architecture	Express gateway, authentication middleware, services, database interface, AI integration.	Foundation
2	Project Setup	Node.js project, npm dependencies, source folder structure.	Prerequisite
3	Authentication & Authorization	Registration, login, JWT protection, bcrypt password hashing.	Required before protected functions
4	Database Configuration	MongoDB and Mongoose User/FAQ schemas and validation.	Persistence foundation
5	FAQ CRUD	Create, read, update and delete FAQ records.	Core business capability
6	AI Automation	Google Gemini-powered FAQ generation and topic generation.	Depends on authenticated workflow
7	Search & Categories	Keyword/semantic FAQ search and category organization.	Uses stored FAQ data
8	Testing & Execution	Postman/ThunderClient endpoint verification.	Validates implementation

Priority is dependency-based and derived from the architecture and documented feature set.
