Phase 1 — Problem Statements

Source-grounded standalone document

Problem Statements

ID	Problem Statement	Source Basis
PS-01	Difficulty generating and maintaining up-to-date FAQ documentation workflows.	Case study
PS-02	Manual processes make drafting complex support answers time-consuming.	Case study
PS-03	Limited visibility into semantic search match keywords and rapid query resolutions.	Case study
PS-04	Lack of unified permission layers protecting private documentation from public adjustments.	Case study
PS-05	FAQ and user data require structural validation before persistence.	Mongoose validation
PS-06	API failures need standardized handling to improve reliability and avoid database leakage.	Centralized error handling

These statements reverse-engineer only the problems explicitly described or directly supported by the uploaded project document.
