Phase 2 — Data Flow & User Stories

Source-grounded standalone document

Data Flow

Step	Flow
1	API client sends an HTTP request to the Express gateway.
2	Express maps the HTTP method/path, parses JSON and handles CORS.
3	Protected routes pass through JWT authentication middleware.
4	Controller/service logic applies domain rules.
5	Mongoose validates and translates operations into MongoDB queries.
6	AI generation delegates to Google Gemini through the SDK integration.
7	Results are returned as standardized JSON; centralized errors handle failures.

User Stories

USN	Role	User Story
US-01	Public User	As a public user, I want to view published FAQs so that I can consume support information.
US-02	Public User	As a public user, I want to search FAQs so that I can find relevant information.
US-03	User	As a user, I want to register so that I can access protected functionality.
US-04	User	As a user, I want to log in so that I can obtain authenticated access.
US-05	Creator	As a creator, I want to create FAQs so that I can maintain support documentation.
US-06	Creator	As a creator, I want to edit/delete owned FAQs so that my documentation remains maintainable.
US-07	Creator	As a creator, I want to generate FAQs using AI so that manual drafting effort is reduced.
US-08	Creator	As a creator, I want to organize FAQs by category so that content is structured.
US-09	Admin	As an admin, I want to manage users, FAQs and categories so that documented administration can be performed.
